11 good arguments in detail

[1] Direct contact with wood

Thanks to the ecological treatment of the floor using only **mafi Oil**, the surface's original hardwearing structure is maintained. This means that all natural advantages, such as warmth and a pleasant atmosphere are preserved.

[2] Resistance through use of **mafi's natural Oil**

mafi Oil penetrates into the wood's pores where it hardens. After hardening the surface is extremely hardwearing yet stays breathable and open-pore. **mafi naturalwoodfloors** are warm and velvety to the touch.

[3] Free from static electricity

The natural, open-pore surface prevents the build-up of static electricity as known from lacquered surfaces.

[4] Regulation of air humidity

Through regular damp wiping with **mafi Wood Floor Soap** the floor absorbs moisture that it later emits to the room. In this way the wood ensures a balanced moisture exchange and a healthy room atmosphere.

[5] Diffusibility

The oiled surface makes the wood almost as breathable as it is in its natural state (approx. 80 %). The floor can breathe!

[6] Wear-resistant top layer

mafi naturalwoodfloors are also suitable for heavily frequented rooms that are used by the public or for commercial purposes. Regular care with **mafi Wood Floor Soap** increases its natural robustness as the soap contains protective vegetable oils. Small pressure marks will disappear without further treatment when the floor is damp wiped.

[7] Colour retention given proper care

Light wood remains permanently light when treated with **white Wood Floor Soap** as white pigments are worked into the wood every time the floor is damp wiped.

Dark floors (**Vulcano**) need protection from strong sunlight and should only be wiped slightly damp. Only in this way will **Vulcano** floors keep their fine, dark colour.

[8] Easy repairs

As no film forms on the wood, diagonal scratches and damage can be repaired at any time by sanding the affected area. Re-oiling is then carried out only on that area.

[9] Environmental compatability

The surface has not been treated with any kind of plastics, synthetic resins or synthetic waxes. Disposal can therefore be carried out without harming the environment.

[10] Hygiene & easy care

The antiseptic effect of a wood floor makes it ideal for sensitive persons or those suffering from allergies. Whereas micro-organisms can survive a long time on synthetic fibres where they also breed, they do not survive on wood.

Our own care series, which includes **mafi Wood Floor Soap**, guarantees easy and effective cleaning.

[11] Low electrical conductivity

Wood has very low electrical conductivity.

This results in a good insulating effect for electrical appliances – a particular advantage for computer rooms etc.
